ABOUT CYGNET® SOFTWARE

The Enterprise Operations Platform for the Oil & Gas Industry

CYGNET

a Weatherford Company

Industry Leadership

CygNet Software is an industry leader in unifying huge volumes of essential operations information into a single view of the business, delivered across the enterprise and beyond. The company serves the natural gas market with complete coverage from producer to consumer.

Designed to create a unified information ecosystem, the *CygNet* Enterprise Operations Platform (EOP) enables oil and gas organizations to improve operational efficiency and market responsiveness, while complying with increasing regulatory initiatives. The company's suite of vertical applications collect, manage and distribute the vast amounts of data integral to all facets of its customers' operations.

CygNet's technology unifies silos of field, production and business data, allowing users across every business function to prioritize and interact with real-time information in support of daily operations and strategic decision making.

Facts

- Founded: 1994
- Website: www.CygNet.com
- *CygNet's* installed base exceeds 10,000 application clients
- *CygNet's* largest implementation exceeds 50 servers and 1,500 clients
- *CygNet's* largest system processes more than one billion data updates every 24-hour period from more than 10,000 remote devices
- Market leadership in North America's exploration and production market segment

What Differentiates Our Solution?

- Lowest Total Cost of Ownership
- Configurable Software Solutions for each market segment
- Extensible Open Technology Platform
- Distributed Computing Architecture
- Enterprise Class Security
- High Bandwidth Data Throughput
- Scalability across the Enterprise and beyond
- Ecosystem of Alliances with Best-of-Breed Application and Technology Providers
- Evergreen System Sustainability over Time
- Packaged Implementation Methodology
- High ROI
- Quick Time to Value

Products and Technology

CygNet EOP, the company's flagship product, integrates with IT standards to provide a robust evergreen solution eclipsing traditional SCADA capabilities. The solution comprises a proven suite of software applications based on a network communication architecture infused with oil and gas domain expertise. It has been purpose-built to integrate effectively with existing IT infrastructure and scale across the enterprise.

CygNet EOP distributes massive amounts of up-to-the-minute information in real time, while maintaining network performance and realizing the lowest total cost of ownership in the industry.

CygNet EOP has proven scalability to support a virtually unlimited number of users while providing unparalleled speed and predictable response times. For many organizations, this offers a much-needed foundation for realizing the promise of the digital oil field.

Customers

CygNet® Software's customer base consists of more than 70 customers – representing a significant share of the domestic production and transmission market. Collectively, they produce more than 50 percent of domestic gas production and operate more than 12,000 transmission pipeline miles across North America.

CygNet customers include the super-majors, the majority of major independent producers, and the largest pipeline companies including:

- Anadarko Petroleum Corporation
- Chesapeake Energy Corporation
- ConocoPhillips - Canada
- Devon Energy Corporation

- EOG Resources, Inc.
- Spectra Energy (Union Gas)
- Shell Exploration + Production
- Southern Union Company
